3)Dr. Manjeet Singh

(57) Abstract :
DIGITALLY CONTROLLED EMERGENCY VEHICLE STARTER DEVICE The invention discloses a digitally controlled emergency vehicle starter device (100) powered by a 220V AC source. It employs an SMPS module (104) to generate a 14.4V DC regulated output, monitored and controlled by a microcontroller (114) through feedback from voltage (116) and current sensors (112). The system uses PWM-driven MOSFET (118) regulation, fuse (108) and relay (110) protection, and a temperature sensor (120) for safety. A user interface (124) with display (126) and buttons (128) allows control, while a 15-foot cable (132) with clamps (134) ensures convenient vehicle connection. The device provides an adaptive, safe, and efficient power boost to start vehicles with weak batteries without needing another vehicle. FIG.1
